Expert ratings: overall score and four dimensions

One expert. Nine seen development tasks per group. Q9 recording correction applied.

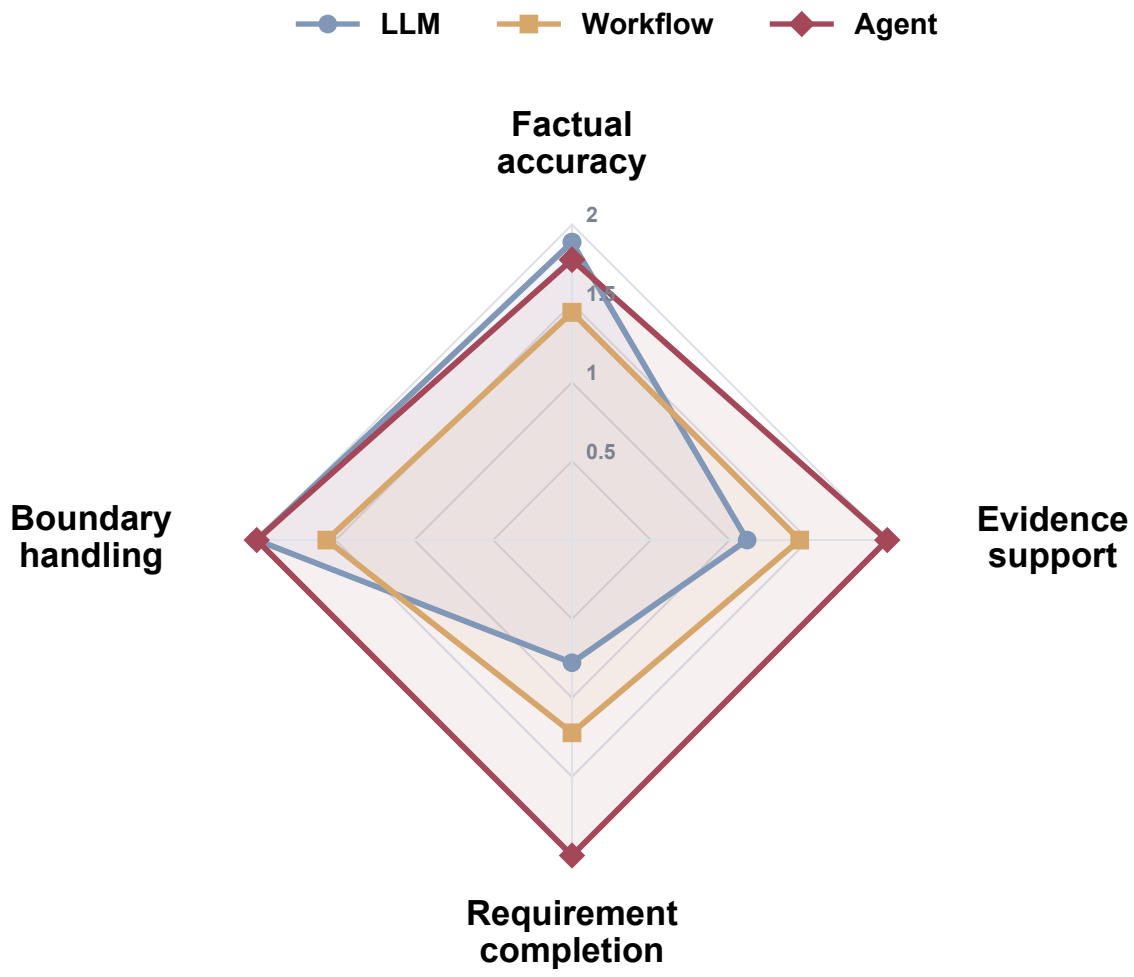

Agent received higher overall ratings, mainly in evidence support and requirement completion.

Ratings describe the delivered evidence and response. These are not classification Accuracy, Precision, Recall or F1.

Four dimensions of expert-rated responses

One expert. Nine seen development tasks per group. Q9 recording correction applied.

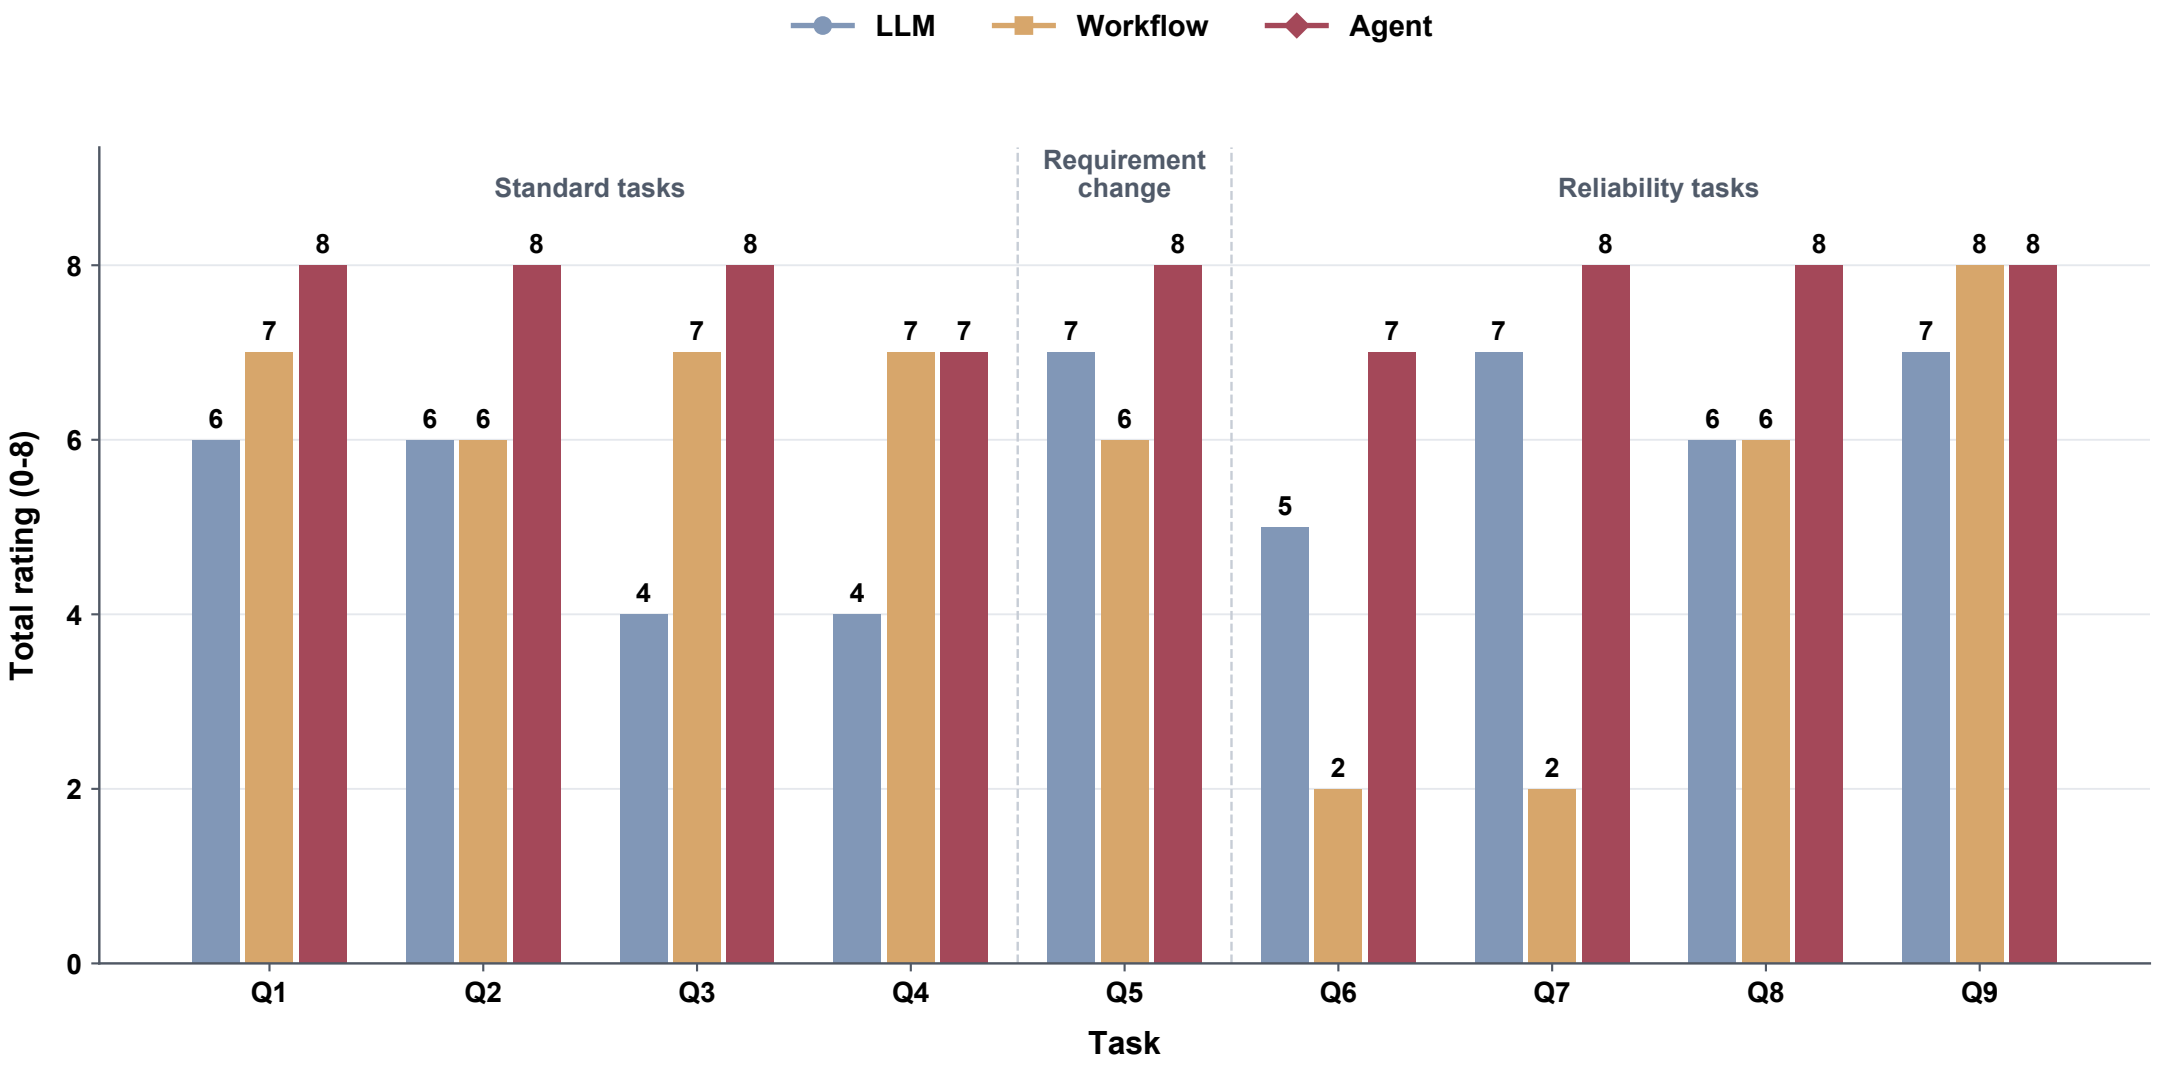

LLM scored slightly higher on factual accuracy. Agent and LLM tied on boundary handling.

Ratings describe the delivered evidence and response. These are not classification Accuracy, Precision, Recall or F1.

Total rating for every task

One expert. Nine seen development tasks per group. Q9 recording correction applied.

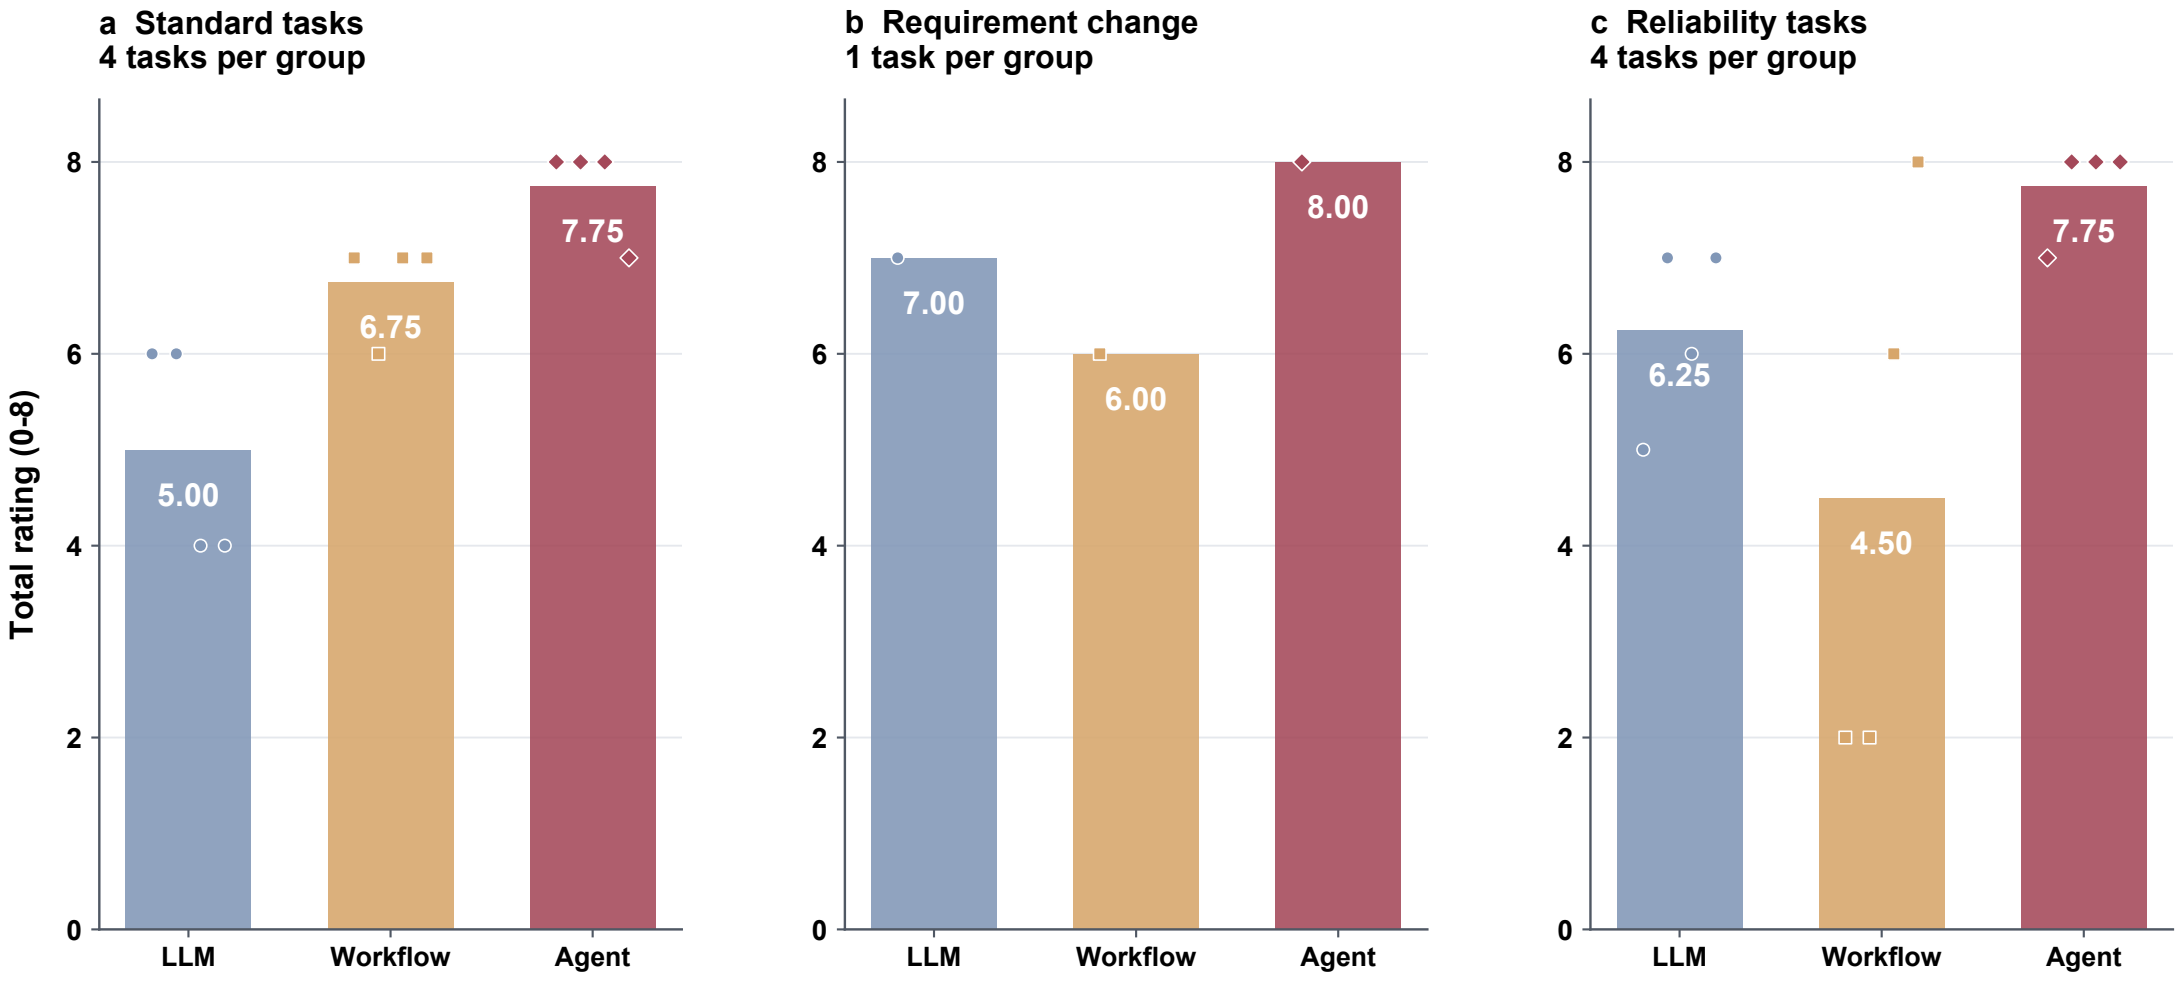

Agent exceeded LLM on all nine tasks and tied Workflow on Q4 and Q9.

Ratings describe the delivered evidence and response. These are not classification Accuracy, Precision, Recall or F1.

Ratings by task category

One expert. Nine seen development tasks per group. Q9 recording correction applied.

The largest mean gap from Workflow occurred in reliability tasks: 7.75 versus 4.50 points.

Ratings describe the delivered evidence and response. These are not classification Accuracy, Precision, Recall or F1.

All task-level dimension ratings

One expert. Nine seen development tasks per group. Q9 recording correction applied.

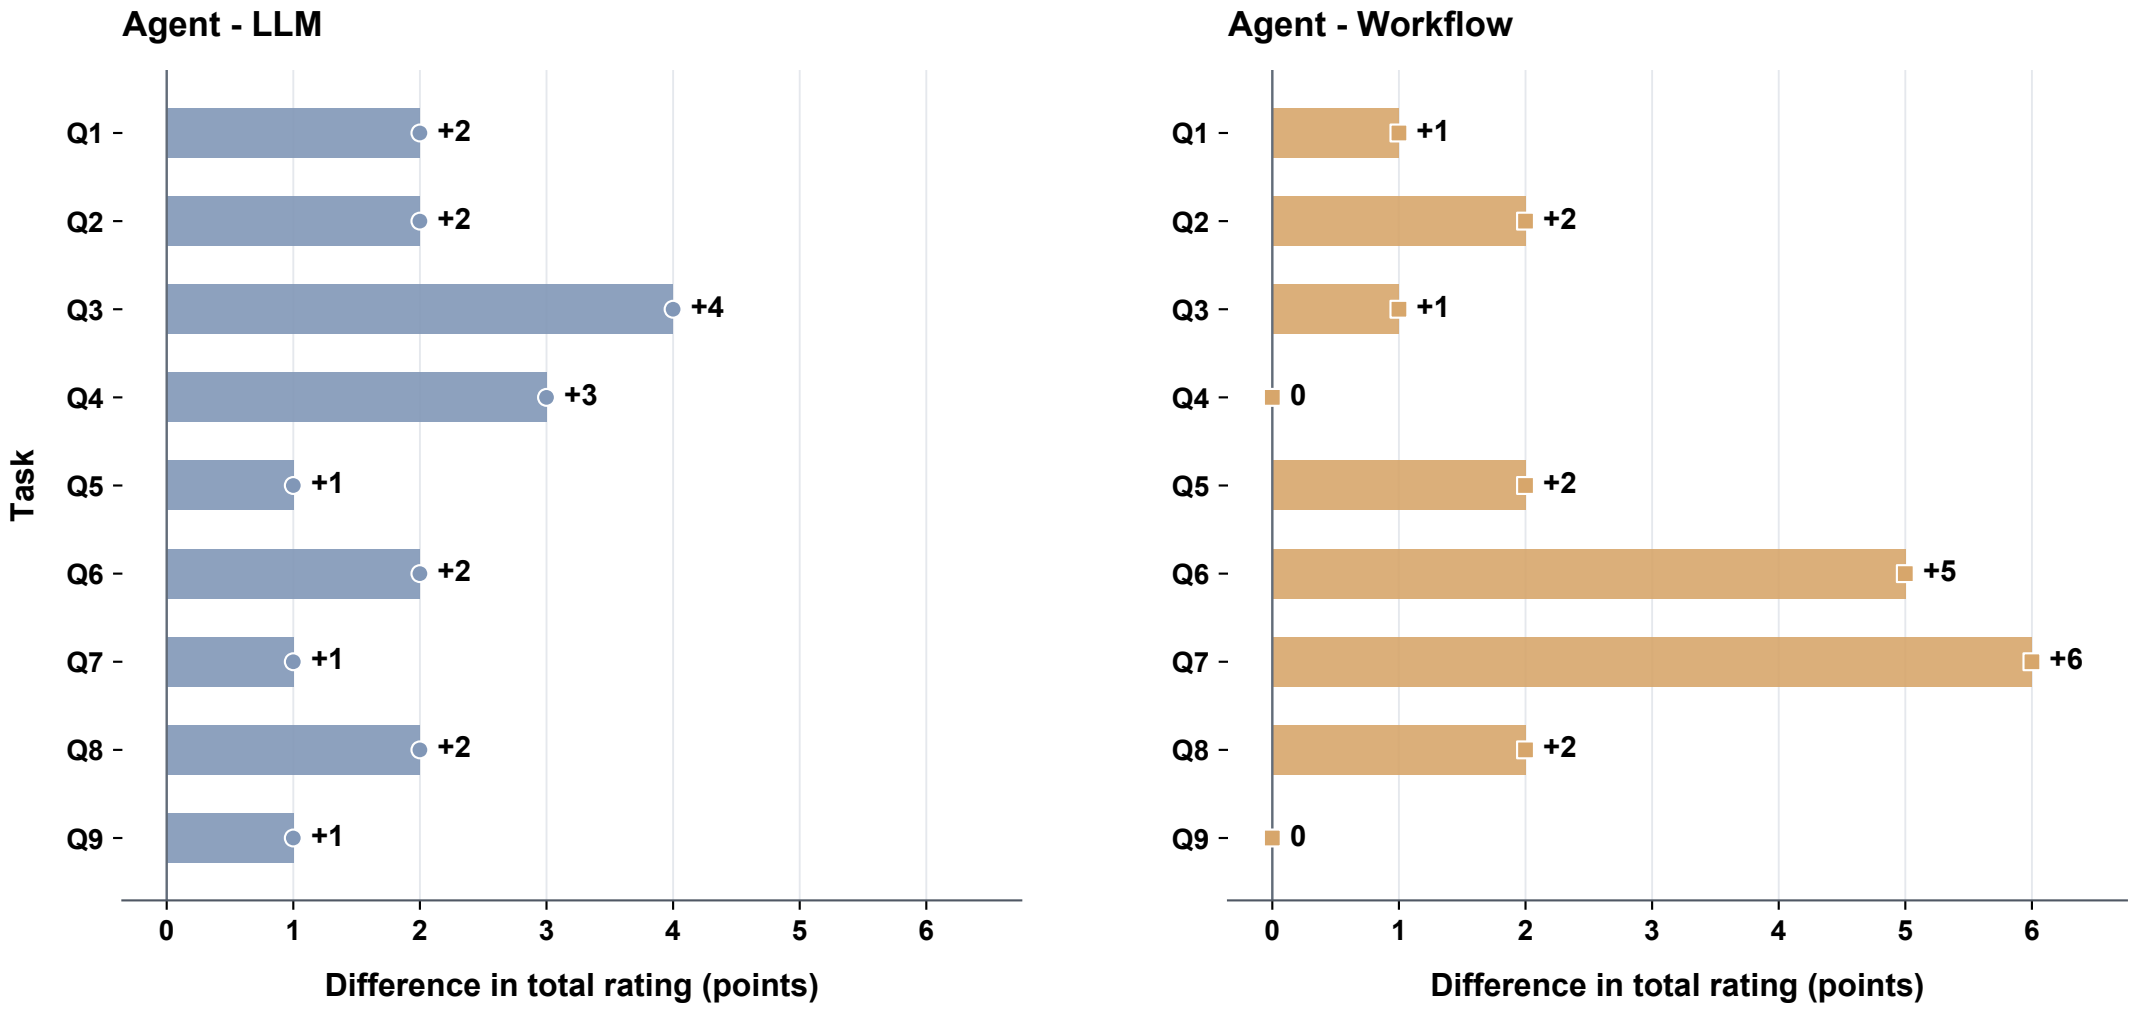

All 108 dimension ratings are shown. Q9 Workflow and Agent entries are both 2/2/2/2.

Ratings describe the delivered evidence and response. These are not classification Accuracy, Precision, Recall or F1.

Within-task differences in total rating

One expert. Nine seen development tasks per group. Q9 recording correction applied.

Q6 and Q7 contribute 11 of the 19 cumulative Agent-Workflow rating points.

Ratings describe the delivered evidence and response. These are not classification Accuracy, Precision, Recall or F1.
